

HIMITSU PROTOCOL

Swap tokens without revealing which deposit you spent

Use a saved secret file to swap WETH for hUSD through
Uniswap

PROTOCOL PRESENTATION • 2026

THE PROBLEM

Wallet swaps expose the link to a trade

- / Wallet address is public
 - / Swap amount and timing are public
 - / Saved files need a safe way to trade through Uniswap
-

THE SOLUTION

Trade using your saved file

/ The check allows only the spend you approved

/ Your hUSD goes into a new saved file

EIP-8141 · TRANSACTION TYPE 0X06

One transaction, four ordered steps

/ Himitsu sends the transaction

/ A separately funded sponsor pays the network fee

WHY THIS DESIGN

Different transaction paths, different trade-offs

APPROACH	PATH	TRADE-OFF
Direct wallet	Your wallet sends and pays	Your address is tied to the swap
Relayer service	A service submits your request	Depends on that service
ERC-4337	Smart account + separate submission path	Supports fee sponsors too
EIP-8141	One transaction with ordered steps	Pool sends · separate fee sponsor

/ One transaction checks the spend, fee, and swap

/ ERC-4337 can also sponsor network fees

RELATED PRIVACY PROTOCOLS

Himitsu focuses on one more private way to swap

PROTOCOL	FOCUS	DIFFERENCE
Tornado Cash Classic	Private deposits and withdrawals	No built-in token swap
RAILGUN	Private balances and contract actions	Broader private finance tools
Himitsu	Use a saved file to swap through Uniswap	Save the tokens received in a new file

/ One focused way to swap

/ Not a replacement for broader privacy tools

PRIVACY BOUNDARIES

Hide which deposit you spent, not the trade

Hidden

- / Which deposit you spend
- / Your saved file's secret
- / Secret check runs in your browser

Still public

- / Amounts and timing
- / Uniswap trade activity
- / Recipient and network details

CURRENT BUILD · NEXT VALIDATION

Prototype built, more testing ahead

Built

- / Secret files and browser checks
- / EIP-8141 transaction flow
- / Uniswap swap to a new saved balance

HIMITSU PROTOCOL · 2026

Next

- / Test on a reachable EIP-8141 network
- / Independent security review
- / Measure privacy and ease of use
